We must make ownership our specialty, promote well developed research and continue to expand our mission in the public and political arena.

Mission of ASIPP and FSIPP:

To promote the development and practice of safe, high quality, cost effective interventional pain management techniques for the diagnosis and treatment of pain and related disorders and to insure patient access to these interventions.

Our Educational Program:

Statement of need:

Pain management and interventional pain management are quickly growing fields in medicine. Emerging science and treatment options for patient care are growing rapidly and it is important for clinicians specializing in this field of medicine to know, understand and evaluate available options to be able to continue to provide the best treatment options and quality of care for patients. Additionally, this field of medicine is subject to higher than normal scrutiny, liability and litigiousness stemming from alleged over treatment and under treatment of care. It is vitally important for clinicians to understand best practices and practice guidelines to insure that they are offering the best care, remaining in compliance to lessen exposure and liability while still insuring access to care and the best treatment outcomes for patients.

Program Goal and Learning Objectives:

The goal of this activity is to disseminate best practices in the assessment, diagnosis, treatment and management of patients with pain.

At the completion of this activity, participants should be better prepared to:

- Recognize and evaluate pain, description of pain, and pain makers
- Interpret new Federal Regulations to assist in implementing standards of care and to assist in patient and compliance.
- Achieve a greater understanding of best practices and available guidelines on new techniques, agents and therapies for patients.
